

TWO RIVERS TERMINAL LICENSES SHELL THIUGRO TECHNOLOGY

Shell Thiogro Technology will help Two Rivers Terminal support increased food production, by meeting the growing demand for a highly concentrated sulphur enhanced fertiliser (11-0-0-75) in the Pacific Northwest and California.

The product uses Shell Thiogro Urea-ES technology, a patented process to incorporate micronized elemental sulphur in a matrix of urea. The technology will be installed at Two Rivers Terminal's facility in Moses Lake, Washington and will be produced on IPCO Rotoforms. In addition to this technology, Shell will also be providing technical expertise and sulphur through an offtake agreement from its Puget Sound refinery, thereby unlocking the full value of the sulphur as a regional crop input.

"Two Rivers Terminal is excited to begin production of this product as soon as possible. We feel there is a great fit within the Pacific North West and California for a product that can provide a controlled release of sulphur over a single growing season." said Steve Peot, General Manager, Two Rivers Terminal.

"The small particle size of the sulphur coupled with a grade of 11-0-0-75 can not only be used as a replacement to bentonite but also as a viable replacement to ammonium sulphate. Leaching of nutrients, including sulphate is a common concern in the agronomic community. With quick oxidation of the elemental sulphur we expect Special-S to provide continuous, season long sulphur nutrition while minimizing losses from leaching".

Shell is committed to offering more and cleaner energy solutions to our ever-growing population. "As a global leader in innovation in the sulphur industry, Shell is committed to helping to meet the challenges the world will face in energy, food and water. Shell Thiogro technology is just one of the ways that we are overcoming these challenges" said Jason Wong, Vice President of Shell Global Bitumen and Sulphur.

"Made possible by Shell Thiogro technology, Two Rivers Terminal will produce a high Sulphur Urea- ES fertiliser which will help resolve food challenges today and, in the future, through increased crop yields; with the intent of improving the lives and profitability of agricultural communities. Through strong collaboration, Two Rivers Terminal and Shell can respond to the population demands of a dynamic and fast changing world."

The technology is expected to be commissioned in Q2, 2019.

Shell Thiogro technologies

Shell Thiogro technologies help to enable fertiliser producers to safely incorporate micron-sized particles of elemental sulphur into the world's most widely-used fertilisers, including MAP, DAP, TSP and urea. The fine elemental sulphur particle size promotes the oxidation of the sulphur within the crop season. Shell Thiogro technologies have been licensed and installed in fertiliser plants in Asia, North America and Australia. Shell Thiogro is part of Shell Sulphur Solutions, Shell's dedicated business for managing the complete sulphur value chain.

Cautionary Note

The companies in which Royal Dutch Shell plc directly and indirectly owns investments are separate legal entities. In this announcement "Shell", "Shell group" and "Royal Dutch Shell" are sometimes used for convenience where references are made to Royal Dutch Shell plc and its subsidiaries in general. Likewise, the words "we", "us" and "our" are also used to refer to subsidiaries in general or to those who work for them. These expressions are also used where no useful purpose is served by identifying the particular company or companies. "Subsidiaries", "Shell subsidiaries" and "Shell companies" as used in this announcement refer to companies over which Royal Dutch Shell plc either directly or indirectly has control. Entities and unincorporated arrangements over which Shell has joint control are generally referred to as "joint ventures" and "joint operations" respectively. Entities over which Shell has significant influence but neither control nor joint control are referred to as "associates". The term "Shell interest" is used for convenience to indicate the direct and/or indirect ownership interest held by Shell in a venture, partnership or company, after exclusion of all third-party interest.

This announcement contains forward-looking statements concerning the financial condition, results of operations and businesses of Royal Dutch Shell. All statements other than statements of historical fact are, or may be deemed to be, forward-looking statements. Forward-looking statements are statements of future expectations that are based on management's current expectations and assumptions and involve known and unknown risks and uncertainties that could cause actual results, performance or events to differ materially from those expressed or implied in these statements. Forward-looking statements include, among other things, statements concerning the potential exposure of Royal Dutch Shell to market risks and statements expressing management's expectations, beliefs, estimates, forecasts, projections and assumptions. These forward-looking statements are identified by their use of terms and phrases such as "anticipate", "believe", "could", "estimate", "expect", "goals", "intend", "may", "objectives", "outlook", "plan", "probably", "project", "risks", "schedule", "seek", "should", "target", "will" and similar terms and phrases. There are a number of factors that could affect the future operations of Royal Dutch Shell and could cause those results to differ materially from those expressed in the forward-looking statements included in this announcement, including (without limitation): (a) price fluctuations in crude oil and natural gas; (b) changes in demand for Shell's products; (c) currency fluctuations; (d) drilling and production results; (e) reserves estimates; (f) loss of market share and industry competition; (g) environmental and physical risks; (h) risks associated with the identification of suitable potential acquisition properties and targets, and successful negotiation and completion of such transactions; (i) the risk of doing business in developing countries and countries subject to international sanctions; (j) legislative, fiscal and regulatory developments including regulatory measures addressing climate change; (k) economic and financial market conditions in various countries and regions; (l) political risks, including the risks of expropriation and renegotiation of the terms of contracts with governmental entities, delays or advancements in the approval of projects and delays in the reimbursement for shared costs; and (m) changes in trading conditions. There can be no assurance that future dividend payments will match or exceed previous dividend payments. All forward-looking statements contained in this announcement are expressly qualified in their entirety by the cautionary statements contained or referred to in this announcement. Readers

should not place undue reliance on forward-looking statements. Additional risk factors that may affect future results are contained in Royal Dutch Shell's 20-F for the year ended December 31, 2017 (available at www.shell.com/investor and www.sec.gov). These risk factors also expressly qualify all forward looking statements contained in this announcement and should be considered by the reader. Each forward-looking statement speaks only as of the date of this announcement, 25 September 2018. Neither Royal Dutch Shell plc nor any of its subsidiaries undertake any obligation to publicly update or revise any forward-looking statement as a result of new information, future events or other information. In light of these risks, results could differ materially from those stated, implied or inferred from the forward-looking statements contained in this announcement.

We may have used certain terms, such as resources, in this announcement that United States Securities and Exchange Commission (SEC) strictly prohibits us from including in our filings with the SEC. U.S. Investors are urged to consider closely the disclosure in our Form 20-F, File No 1-32575, available on the SEC website www.sec.gov.
