Sub./Ogg. : Commissioning of the second Euromel® Melamine Unit at Xinjiang Xinlianxin Energy Chemical Co., Ltd.

**Eurotecnica is pleased to announce that the largest High-pressure Melamine Complex in the World is on-stream at Xinjiang Xinlianxin Energy Chemical Co., Ltd.**

Another huge step forward for Eurotecnica Group's proprietary Euromel® Melamine technology, the only one that combines Total Zero Pollution with the lowest OPEX and CAPEX in the melamine industry.

With the successful commissioning of the 2<sup>nd</sup> Euromel® 60,000 MTPY High-pressure Melamine Plant, Xinjiang Xinlianxin Energy Chemical Co., Ltd., becomes the largest Euromel® melamine producer in the world.

Both Eurotecnica and Xinjiang Xinlianxin teams have done an outstanding job in delivering a project this big, in a record 18 months.

The **Euromel® 60,000MTPY Melamine Plant Series** feature a single-train scheme, as they are based on the innovative yet proven (in two other plants already) single-reactor architecture.

On top of the traditional Total Zero Pollution feature, this scheme provides unparalleled levels of energy efficiency and CAPEX reduction.

With 40 years of experience in the melamine, 21 melamine plants, 670,000 MTPY licensed nameplate capacity, Eurotecnica has transformed this business from a market with few players to a worldwide open market.

Eurotecnica is part of Proman Group, a global leader in natural gas derived products with operations and assets all over the world, including Europe, the United States, Trinidad and Tobago, and the Sultanate of Oman.
